Reason for Allowance

1. Applicant's arguments filed 10/31/07 (pages 7-9 of the response) with respect to claims 6-8, 17-19 and 24 have been fully considered and are persuasive. The rejection of the claims has been withdrawn from the previous office action mailed 5/31/07 and the **claims 6-8, 17-19 and 24 are allowed.**

Allowable Subject Matter

The independent claims 6,17 and 24 are directed towards a method and a wireless communication system capable of transmitting and receiving data via a plurality of channels in a Bluetooth system comprising:

- a transmitting portion arranged for transmitting data to the counterpart wireless communication apparatus through a plurality of frequency channels;
- a controller arranged to confirm the characteristics of data for transmission, divide the data into a number of pieces of data according to the data characteristics, allot the data to a predetermined number of channels, first transmit the data to a counterpart wireless communication apparatus, subsequently determine whether the counterpart wireless communication apparatus receives the data through the respective channels, to thereby obtain the number of transmittable channels to the counterpart wireless communication apparatus for communication, and transmit the data according to the obtained number transmittable frequency channels,

- wherein when the data for transmission is real-time data, the controller divides the data into grades to grade basic information for utilization of the real-time data for the highest level, allots the grades from the basic channel to additional channels according to the grades, and when the data for transmission is non-real-time data, the controller simply divides the data into a plurality of pieces of data, and allots the data to the plurality of frequency channels

The prior art references individually or in combination fails to render the above underlined unique feature obvious. Therefore the independent claims 6,17 and 24 and their dependent claims are allowed.
